

Summary

Full-stack Developer with 4+ years of experience delivering scalable and secure web applications. Expert in Java (Spring Boot, J2EE), React.js, Angular, and AWS, with proven ability to design microservices, develop REST/GraphQL APIs, and implement robust security using OAuth2.0 and JWT. Skilled in automating deployments via Docker and Jenkins within Agile teams, collaborating effectively with cross-functional stakeholders to translate requirements into impactful technical solutions.

Education

Postgraduate In Web Development Waterloo, ON	Jan 2022 - Apr 2023
Bachelor Of Engineering In Computer Science Rajkot, India	Jun 2017 - Jun 2021

Skills

- **Languages:** Java, Python, JavaScript, TypeScript, SQL
- **Frameworks & Libraries:** J2EE (Servlets, JSP, EJB), Spring Boot, Spring MVC, Spring Security, Spring Data, Hibernate, JPA, JSF, Flask, Django, React.js, Redux, Angular, Node.js, Express.js
- **Databases:** PostgreSQL, MySQL, MongoDB, Oracle DB, Redis, Cassandra
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Jenkins, GitLab CI/CD, Maven, Gradle, NGINX, Terraform, Ansible
- **APIs & Integrations:** RESTful APIs, GraphQL, SOAP, OAuth2.0, JWT, Swagger/OpenAPI, RabbitMQ, Apache Kafka
- **Tools & Testing:** Git, JIRA, Confluence, Postman, JUnit, Mockito, TestNG, Log4j, SLF4J, IntelliJ IDEA, Eclipse, VS Code, PyCharm, SonarQube
- **Concepts & Methodologies:** Microservices, MVC Architecture, Agile (Scrum/Kanban), TDD, BDD, CI/CD, Event-Driven Architecture, Reactive Programming, Firebase, WebSockets

Experience

Wezom	ON, Canada
Full-Satck Software Engineer	Oct 2022 - Current
• Engineered full-stack microservices using Java 11, Spring Boot, Hibernate, and PostgreSQL, powering a modular web platform that supports over 15,000 active monthly users with secure data access and scalable architecture. • Built reusable frontend components with React.js (TypeScript) and Material UI, while integrating GraphQL APIs to reduce over-fetching and streamline complex data queries across multiple services. • Configured Spring Security with OAuth2.0, JWT, and role-based access control, ensuring compliance with enterprise-grade authorization standards across internal admin and user dashboards. • Developed and deployed an AI-based recommendation engine using OpenAI API and embedded logic into Java microservices, enhancing product listing accuracy by 40%. • Containerized microservices with Docker, integrated GitLab CI/CD pipelines, and deployed to AWS (EC2, RDS, S3), achieving zero-downtime rollouts and reducing infrastructure cost by 25%. • Worked directly with product managers and stakeholders during sprint planning, demos, and backlog grooming, translating business requirements into technical solutions and ensuring iterative feedback loops. • Monitored logs and health metrics using NGINX reverse proxy, Postman, and ELK Stack, optimizing response time by 20% via asynchronous request handling and SQL query tuning	
Bacancy	Bengaluru, India
Software Engineer	Jul 2020 - Dec 2021
• Developed core modules for a logistics ERP using J2EE, JSP, Servlets, and Spring MVC, handling data-intensive operations like invoice processing, shipment tracking, and customer reports. • Migrated monolithic Java EE systems to Spring Boot microservices, leveraging MySQL and Redis caching to achieve sub-second response times for real-time status updates and notifications. • Integrated Angular 10 frontend with REST APIs, delivering a single-page application (SPA) that significantly improved dashboard performance and interactivity for operations teams. • Created API layers that supported both REST and GraphQL endpoints, allowing external vendors to fetch nested tracking data efficiently while maintaining internal RBAC controls. • Led implementation of unit and integration testing using JUnit, Mockito, and Jacoco, maintaining over 85% test coverage and reducing critical bugs in production by 35%. • Integrated Firebase push notifications and Stripe payments to support mobile order alerts and dynamic invoicing, using Node.js bridges for hybrid mobile clients. • Participated in client demos and daily standups with international customers, presenting proof-of-concepts and technical walkthroughs to gather timely feedback and reduce miscommunication.	

Projects

E-Learning Platform
• Developed a microservices-driven e-learning platform with Angular for the front-end and Spring Boot for back-end services, hosted on AWS (S3, RDS). • Built microservices for user authentication, course delivery, and payment processing, using RESTful APIs and PostgreSQL, supporting 5,000+ monthly users. • Leveraged Docker to containerize microservices and Git for version control, enabling seamless updates across services. • Enhanced UI with HTML5, CSS3, and Bootstrap, improving user engagement by 15%.
Entertainment Chatbot using GPT-4 (Python, Pandas, Seaborn, Scikit-learn)
• Engineered a Flask application using OAuth2.0 for secure access and SendGrid for email notifications. • Integrated media search service using TMDb and OpenAI APIs, enhancing entertainment option discovery. • Built Redis messaging framework for seamless communication and Docker-deployed microservices, optimizing performance.
